FOUNDRY IN THIS CITY MUST BE ENLARGED

GROWTH OF AN INDUSTRY REQUIRES THE ERECTION OF NEW BUILDINGS—WESTERN FOUNDRY & MACHINE COMPANY IS EXPANDING AND REACHING OUT IN TO NEW TERRITORY—CAR WHEELS MADE BY THE HUNDREDS—ORDERS RECEIVED FROM ALL OVER THE INTER-MOUNTAIN STATES

Iron, copper, brass and aluminum castings are manufactured in Ogden and structural iron, boilers and machine parts are turned out in a manner that permits of their being sold in competition with the products of eastern manufacturers. That such manufacturing can be done successfully and profitably in this city bears out the statements of those who have boosted the city for years that manufacturing can be made a success in Ogden.

One of the establishments doing such manufacturing in the Western Foundry & Machine company situated at 2257 Lincoln avenue, on a spur of the railroad track. A general foundry business has been carried on for about twelve years, but four years ago the plant was enlarged to include a general machine shop and since that time the business has grown to such an extent that two new buildings are to be erected on their ground this spring as soon as the weather permits.

The buildings to be erected will be used for the boiler shops and the foundry work, as those two branches of the business have outgrown their present quarters. Orders now standing, waiting to be filled, could be turned out faster providing there was more room in which to work.

Twenty men are employed at the present time and the monthly payroll is \$1500.

The space occupied by the establishment is one-half acre. On this ground are the machine shop, the boiler repair and blacksmith shops and the foundry. The other space is taken up with smaller store houses, trackage and space for the placing of the larger machines to be repaired.

The machine shop occupies the new brick building and has 2400 square feet of floor space. It is well lighted from large windows on four sides as well as skylights. In the shop are planers, drillers, shapers and all the necessary tools in addition to a complete woodworking establishment where, among other things, the patterns for the foundry are made. A large crane has been installed to lift heavy objects about the shop or to load and unload machines from wagons or cars.

While the shop is not of such great size, the machinery is modern and is arranged in a manner to facilitate the rapid turning out of work. Among the new machines to be installed at once is a rumbling machine for cleaning and polishing castings after they come from the moulding rooms of the foundry. The rough castings will be placed in the rumbling and will be turned and shaken with scrap iron sand and charcoal until the roughness is worn off and a dark color is given. The foundry division of the establishment occupies a large building

next to the machine shop near the railroad track, allowing for the rapid handling of the material used. There are two furnaces, the large one for the melting of iron and a smaller one where brass, copper, and aluminum are reduced in crucibles. An inclined track leads to the place from which the iron and coke are dumped into the large furnace and a small car operating by an electric wench is used for carrying material.

The interior of the building has a sanded floor space because of the nature of the work carried on and most of the floor space is taken up with the sand molds used for the construction of the castings.

To the uninitiated the work done in the foundry room is a source of great interest. The iron in small pieces and the coke are dumped into the "cupola" as the furnace is called. The amount of coke necessary to melt the metal is known by long experience in that sort of work.

To light the coke a specially designed coal oil and crude oil torch is placed near the bottom of the mass until the furnace is well ablaze. The torch is then withdrawn and a strong blast of air from an electric blower in 15 minutes the iron begins to flow and collects in a molten mass at the bottom of the furnace ready to be tapped.

By means of wooden patterns of the casting to be made, impressions are made in boxes of sand. A special sand must be secured for this work and but little is found in this neighborhood. It is necessary that the sand must not burn when the molten metal is turned into the mold.

When the molds have been prepared the molten iron is tapped off into ladles, with handles sufficiently far apart to permit the men carrying them to be safe from the hot liquid and the metal is poured through a small opening into the sand mold. The molten metal as it comes from the furnace glows with incandescence, and a ladle of it is sufficient to light a room. Even after it has been poured upon the damp sand it retains its incandescence for some time.

During the past week an order from the Utah Construction company for 100 18 inch car wheels and 100 60 inch car wheels was being filled. To secure the hardness necessary for such castings an iron rim to the sand mold was used. When the molten metal came in contact with the cold iron it cooled quickly and became much harder than if the iron rim were not used.

The Utah Construction company has a standing order with the foundry for all the 12 inch car wheels that can be turned out.

Besides supplying local trade, the center.

Western Foundry & Machine company has reached out throughout the intermountain country until it has markets in Nevada, Wyoming, Idaho and Montana. When the plant is still further enlarged efforts will be made to cover a wider territory.

As an indication that Ogden is a progressive town and as prosperous as many in the west, it will be noted that all the establishments considered in these articles are growing to such an extent that more space is needed. The Shupe-Williams Candy company has already built an addition to its large factory, and the overall factory of the John Seawright & Sons company is to be enlarged at once. The fact that the foundry people must enlarge their quarters only goes to point out more strongly the most encouraging future that lies before this city.

SOME NEW RESOLUTIONS.

Resolve:

That you will keep so busy boosting that you won't have time to knock. That you will vote, talk and work for a bigger, better, brighter town.

That you will help to make this a good town so the town can make good.

That you will increase the value of your property by improving its appearance.

That you will say something good about this town every time you write a letter.

That you will invest your money here where you made it and where you can watch it.

That you will not point out the town's defects to a stranger or fail to point them out to a neighbor.

That you will keep your premises picked up and your buildings repaired as a matter of both pride and profit.

That you will never buy a thing outside of town until the local merchants have been given a chance to sell it to you.

That you will brag about this town so much that you will have to work for this town in order to keep from being a liar.

That you will take half a day right now to pick up the odds and ends around the place and turn them into either use, money or ashes.

That you will contribute as much money as you can afford, and as much enthusiasm as anybody, to any movement to develop the town's resources.

That you will join the movement to induce the people in this town to do their buying at home, or, if there is no such movement, that you will start one.

That you will make friends with the farmers, if a town man, or with the town folks, if a farmer and help work together for the good of the community of which this town is the

Blanket Season Is Here
